

What is *Squid Game Red Light Green Light Cashout*?

Squid Game Red Light Green Light Cashout is an online multiplayer 'Crash' game of chance created by Incentive Games.

Place your bets (A or B) and watch the multiplier grow!

The goal is simple: cash out before the Red Light. If you do, you win. If you wait too long, you lose.

Game Rules

Multiplier and Bet Limits (per single bet):

	Minimum	Maximum
Bet Limits	£100.00	£500,000.00
Multiplier	1.00x	1,000,000x

Depending on which is reached first, a bet is automatically paid out if the multiplier hits 1,000,000x or the potential win amount reaches £500,000.00 (or currency equivalent).

You can select different amounts for Bet A and Bet B.

Please note: if the operator has its own payout limit, this will apply instead. Always check the site's Terms and Conditions for full details.

How to Play

Step 1. Place Your Bets

Before each round begins, a countdown timer will appear, showing how much time you have left to place your bet. You can also place a bet during the current round to participate in the next one.

Choose your stake and place your bet before the round begins. You can modify or cancel your bet before a new round commences. You have the option to place up to two bets in the same round — one for Bet A and one for Bet B.

Step 2. Green Light

When betting closes, the round begins. The Green Light is displayed, and the multiplier starts at 1.00x. As Bet A or Bet B runs, the multiplier increases.

Step 3. Cash Out

The longer Bet A or Bet B runs, the larger the win multiplier grows – increasing your potential winnings. Cash out before the Red Light to lock in your win.

Players aim to cash out before Red Light occurs to win their bet multiplied by the current multiplier. The multiplier starts at 1.00x and increases at a rate of 100ms up to a random, predetermined value. Players can cash out at any point between 1.01x and 1,000,000x.

Your choice has no impact on the game other than deciding when to cash out.

Step 4. Losing Condition

If you have not cashed out and the Red Light shows while Bet A or Bet B is still running, that bet loses. When a bet loses, the round for that selection ends and the wager is forfeited.

Cashing Out

Cash out before the Red Light appears to secure your winnings. Your bet will be multiplied by the current multiplier, and the total amount will be shown on your screen. Once you cash out, your bet for that round ends and you can start placing new bets for the upcoming round.

A few key notes:

- If the Red Light appears at 1.00x, all bets placed in that round are automatically lost.
- Once you cash out, the round is over for that bet, and you can prepare for the next one.
- You will be cashed out automatically if the maximum payout per bet of 1,000,000x or £500,000.00 (whichever comes first) is reached.
- All winnings are rounded down to two decimal places.

Setting Up Auto Cashout

To enable Auto Cash-Out, toggle the 'Auto Cash Icon' button located bottom right of the game area.

Enter a multiplier amount into the Auto Cash-Out field.

The game will automatically cash out once Bet A or Bet B reaches that multiplier. If the Red Light appears first, the bet is lost.

Once the round starts, you cannot modify Auto Cashout settings, but you can still cash out early by pressing the 'Cash Out' button.

Bet History and Replay Function

In your user history you will be able to view: the games you have played, the amount staked and how much you have won.

To view the full results of a game, click the arrow to expand the details. From here, you will see the exact date and time of the bet, alongside the outcome – including the multiplier you cashed out at and the final multiplier of the game.

The user history will show the last 10 games you have played. For a complete history, please refer to your operator account.

Statistics Panel – Last Multiplier Results

The statistics panel displays the crash multiplier values from recent rounds, with the most recent rounds listed first.

Return to Player (RTP)

The Return to Player (RTP) is the theoretical statistical percentage of the total money bet in a game that is paid out as winnings over time.

For this game, the RTP is 98.5%.

Disconnection Policy

Because this game is played over the internet, slow network speeds or device performance may affect gameplay.

Key rules if disconnection occurs:

- If disconnection occurs before Green Light, the bet is voided and the stake is returned.
- If disconnection occurs after Green Light and the Red Light appears immediately at 1.00x, your bet is settled as a loss.
- If disconnection occurs after Green Light and the multiplier is greater than 1.00x, a forced cashout is applied at the last multiplier shown.
- If disconnection occurs with an auto-cashout active, the game continues with auto-cashout in place.
- Once reconnected, you can view Bet Outcomes in User History.

You can exit the game anytime using your device or browser navigation. Exiting counts as a disconnection, and the rules above will apply.
